

Standard Color Ceramic Frits

The Ceramic Advantage. Ceramic Enamels possess unrivaled durability and color. Ceramic Frits are actually fused onto the surface of the glass itself: they will not delaminate, blister or crack. Ultimate chemical resistance means that Ceramic Enamels will not fade, stain or discolor upon contact with glazing compounds sealants or gasketing materials. Ceramic Frits are hard, as hard as glass itself. Every color is "Green". Ceramic Enamels are non-toxic, non-combustible. Our full line of Standard Colors and Custom colors are designed to meet requirements outlined in ASTM C 1048.

*Not pictured, "White"

Color swatches are approximate and are for representation only.
We recommend a sample be viewed once a color selection is made.

Custom colors available upon request.
